REQUEST FOR ENVIRONMENTAL IMPACT ANALYSIS		*Report Control Symbol (RCS):* 25-096
INSTRUCTIONS: *Section I to be completed by Proponent; Sections II and III to be completed by Environmental Planning Function. Continue on separate sheets as necessary. Reference appropriate item number(s).*		
SECTION I - PROPONENT INFORMATION		
1. TO *(Environmental Planning Function)* 802 CES/CENMP	2. FROM *(Proponent organization and functional address symbol)* Air Force - 802 CES	2a. TELEPHONE NO. 512-557-1478
3. TITLE OF PROPOSED ACTION CTA 802 CES Capehart Housing Demolition		

4. PURPOSE AND NEED FOR ACTION *(Identify decision to be made and need date)*

1. State the purpose of this action.
The purpose of this action is to return the Capehart Housing area on Joint Base San Antonio (JBSA)-Chapman Training Annex (CTA) to the Department of the Air Force (DAF) and to subsequently demolish the 66 buildings (124 housing units) - along with slab foundations, roads, utilities and other infrastructure - to return the parcel to an open, natural state for future development.

The Capehart Housing area is currently under the ownership of Balfour Beatty Communities (BBC) as the development was privatized under the Military Housing Privatization Initiative (MHPI).

2. State the need for this action.
A determination was made during the MHPI privatization procedures and agreements of Lackland and CTA (formerly Lackland Training Annex) that the Capehart Housing would be demolished. The demolition was intended to be accomplished by BBC, but circumstances caused delays, was descoped from the privatization contract, and demolition activities have yet to commence. Very little unconstrained, developable land exists on CTA and this action would make available prime, unconstrained land for future development and mission use. Additionally, demolition and abatement of hazardous materials would remove potential hazard migration and liability created by these abandoned houses and associated infrastructure.

3. What do you intend to accomplish and why is the action necessary?
The intention is to return the Capehart Housing real property to DAF control, to demolish the military family housing (MFH) structures and associated infrastructure, and return the land to an open, natural state making it available for future JBSA mission development and use.

4. What is currently being done to meet the need?
The Capehart Housing area is abandoned, fenced, and remains locked to prevent unauthorized individuals from entering. The conditions of the houses and neighborhood are unsafe due to hazardous structural conditions, heaving of roads, overgrowth of vegetation, wasps, venomous snakes, and other wildlife hazards.

5. Provide any additional details related to the Purpose and Need for Action.
Capehart Housing was constructed in 1959 and operated as MFH until approximately 2014. Some units were renovated over the years, with projects that included abatement or stabilization of asbestos-containing material (ACM) and lead-based paint (LBP). 802 Civil Engineering Squadron (CES) has documentation pertaining to the construction, various preventative maintenance activities, as well as lead risk assessments for the Capehart units.

A Supplemental Environmental Baseline Survey (EBS) is being prepared by 802 CES for the real property transfer back to the DAF.

Need Date: 08/31/2025

5. DESCRIPTION OF PROPOSED ACTION AND ALTERNATIVES (DOPAA) *(Provide sufficient details for evaluation of the total action.)*

1. Describe the proposed action.
Project Number for Capehart Demo is MPYJ253828. The proposed action is to transfer the control of the property from BBC (privatized housing contractor) to the DAF. This transaction will be led by Air Force Civil Engineer Center (AFCEC/CI), vs. 502d Civil Engineer Group

(502 CEG/CERR), as privatized housing contracts are managed centrally by the DAF. The demolition project will be led by 802d Civil Engineer Squadron, (802 CES/CEN). Upon completion of the real property transfer, the DAF will contract for the demolition of the 66 buildings (124 housing units; see attached diagram), the slab foundations, streets, driveways, curbs, utilities and stormwater infrastructure, concrete retaining walls, and any other manmade infrastructure in the neighborhood. Prior to demolition, hazardous materials will be abated and removed from the structures to allow for safe demolition and disposal of debris. Potential hazardous materials associated with the housing units and housing area include but are not limited to: mercury in thermostats, mercury light bulbs, fluorescent light tubes and compact fluorescent lights, ballasts, miscellaneous paints, lubricants, cleaning supplies, fire extinguishers, insecticides, and other household hazardous materials left in the housing units, refrigerants, pole mounted transformers, and other miscellaneous items encountered in the neighborhood.

A "construction bubble" will be established for the project, with an entrance established directly to the Capehart neighborhood from Ray Ellison Drive. 502 CEG/CERR (Real Property) will work to establish an easement for the temporary construction entrance on Ray Ellison Drive. All site workers and vehicles will use this entrance, and security will be provided by the demolition contractor. Coordination with 802 Security Forces Squadron is required to ensure the construction bubble meets JBSA security requirements.

The demolition contractor will establish a laydown/staging area adjacent to the housing area (see attached siting request). The laydown area will be fenced to be part of the authorized construction bubble. The laydown area will likely include a job trailer and portable toilets. These areas must be restored as part of the final grading and revegetation of the site upon completion of work.

Trees and overgrown vegetation will be removed in consultation with the 802 CES Natural Resources Office (NRO), with mature live oaks, cedar elms, and other desirable native species retained to the extent possible.

Soils in the immediate proximity of the houses will be characterized for potential lead and chlordane/pesticide contamination for waste profiling and disposal. The demolition contractor must follow the procedures in the JBSA Soil Management Plan and dispose of all contaminated soils at an approved facility. Authorized representatives of 802 CES Environmental will sign manifests as the generator. Upon consultation with JBSA Environmental, after demolition and removal of contaminated soils, the site will be graded and vegetation restored. Contact 802 CES NRO for details on seed mix and restoration requirements.

Prior to commencing any ground disturbing activities, obtaining authorization under the Texas Commission on Environmental Quality (TCEQ) Construction General Permit (CGP) TXR150000 will be required as well as compliance with applicable local (JBSA), state, and federal rules and regulations. Temporary best management practices (BMPs) shall be installed prior to commencing demolition and ground disturbing activities to prevent sediment and contaminants from leaving the site.

2. Describe alternatives to the proposed action.
The no action alternative would be to leave the control of the houses and property with the privatization contractor, with no demolition. The buildings would continue to decay and to create increasing hazards.

Another alternative is to leave the Capehart Housing under control of BBC and have the privatization contractor complete the demolition when funding becomes available. This alternative was part of the original plan, but it was tied financially to construction of new houses on the same site. Since there is no longer a requirement for new replacement houses, the original plan was not followed, and it is not financially feasible under privatized housing initiative to have the privatization contractor demolish the houses. Additionally, having the privatization contractor demolish the houses and retain control of the property does not meet the purpose and need of having the land available for future DAF development, unless the contract is modified to transfer the land after demolition.

3. What alternatives were eliminated from consideration and why?
The no action alternative was eliminated due to DAF decision to eliminate the risk of the status quo and to make the land available for future development. The other alternative was eliminated because of financial infeasibility and because it does not meet the purpose and need.

4. Describe what will happen if no action is taken.
If no action is taken, the risk posed by the decaying houses with asbestos and lead based paint increases. The site is attractive to children and there is evidence of recent access to the buildings, in spite of the locked exclusion fencing.

5. Please provide a description of the construction action and timing when it will occur.
Demolition activities are proposed to begin in January 2026. Work sequence would include establishing site access and construction bubble with laydown areas, hazardous material removal and disposal, demolition and disposal of structures and utility infrastructure, clearing of unwanted trees, demolition of roads, site grading and restoration/revegetation, and maintenance to ensure establishment of vegetation. It is anticipated that the active demolition phase will last approximately one year, and a second year will be required for

ensuring reestablishment of vegetation.

802 CES Project Manager is Mr. Adam Dahham, ahmed.dahham.2@us.af.mil

6. Describe the project location. Attach map(s)/diagram(s) – make sure to include an overview map of where your requested project area is on the installation.
See attached map.

7. Describe additional project requirements: 1) Construction and site preparation requirements (include approx. area of ground to be disturbed); 2) Does the project require a laydown yard or storage area? If so, describe the location and groundwork required.
The Capehart Housing fenced area is approximately 35-acres.

8. Describe additional project requirements: 3) Will soil boring/sampling/potholing occur during a design phase? If so, a separate dig permit will be required; 4) Detailed operational activities; 5) Equipment/material lists.
A sampling plan shall be developed for soil surrounding the foundations, for at least lead and chlordane. The results will be used to determine if soil needs to be removed and disposed of prior to regrading or stabilization.

9. Will the project require utilities? How will those utilities be provided to the facility?
During site visits in August 2025, no active utilties were discovered within Capehart. Project will include removal of underground gas, water and wastewater utilities, removal of overhead electric and communications lines and poles, and remaining transformers. No utilities will be brought on-site except for potentially accessing utilities from off-base to support job trailers.

10. Provide any additional details related to the Description of the Proposed Action and Alternatives (e.g., outline mitigation measures and other issues).
The project should include landfill avoidance of wastes by maximizing recovery, reuse, and recycling of assets such as concrete, asphalt, iron, copper, and architectural components of historical interest.

SECTION III - ENVIRONMENTAL ANALYSIS DETERMINATION

17. ◉ PROPOSED ACTION QUALIFIES FOR CATEGORICAL EXCLUSION (CATEX) #A2.3.16. ; OR
○ PROPOSED ACTION DOES NOT QUALIFY FOR A CATEX; FURTHER ENVIRONMENTAL ANALYSIS IS REQUIRED.

18. REMARKS
Secondary CATEX selections: A2.3.11.

The Air Force re-taking control of the property is covered by CATEX A2.3.16., as the action constitutes an ingrant and is under 50 acres. The demolition of Capehart Housing qualifies for CATEX A2.3.11. CATEX A2.3.11 justifies application of a CATEX where NEPA analysis of a similar action in a similar environment resulted in a Finding of No Significant Impact. There are 35 Air Force bases with housing privatization EAs resulting in a FONSI. These EAs were all conducted from 2001 - 2011. A review of 29 of these showed 27 included demolition of housing in the scope, and several included demoltion of Capehart housing. A total of 13,366 housing units were proposed for demolition, or an average of 460 housing units demolished per installation/EA. Three of the EAs included demolition of entire Capehart neighborhoods. Four of the EAs reviewed were for military family housing demolition at AETC bases, similar to the proposed action. The majority of Air Force EAs that were conducted for MFHPI actions were conducted in the period from 1996 - 2011, including the MFHPI EAs for Lackland that we are unable to find complete copies of. Application of CATEX A2.3.11 demonstrates that a similar action, in a similar environment, was evaluated through the Air Force EA process and was found to be eligible for a Finding of No Significant Impact. The analysis in the EA is not a substitute for the NEPA analysis in the AF Form 813 that justifies the application of a CATEX A2.3.11. Therefore, the age of the EA is not directly relevant. Over 30 Air Force EAs with FONSIs demonstrate that demolition of family housing units in association with MHPI, properly conducted, is an action that can be conducted routinely across the U.S. without signficant effect to the environment, and could qualify for a CATEX.

For the purpose of formally documenting application of CATEX A2.3.11, we have chosen a specific similar project evaluated in an EA resulting in a FONSI. The Final Environmental Assessment, Military Family Housing Privatization for Altus AFB, Oklahoma (July 2004) includes demolition of 299 Capehart housing units, which is similar to our proposed action of demolishing 167 Capehart housing units. The environment for the two projects is similar; late 1950s family housing areas at Air Eductation and Training Command training bases in the south-central United States. The Altus action resulted in a FONSI, signed 2 Nov 2004. The Altus AFB EA and FONSI are attached to this 813.

An earlier version of this same Lackland demolition project was evaluated in an EA (Environmental Assessment for Private Sector Financed Miltary Family Housing, May 1998). Two subsequent EAs and FONSIs associated with privatized housing were completed for Lackland, in 2002 and 2006. While Lackland was the first housing privatization accomplished in the Air Force, and has completed three EAs in support of this program, none of the Lackland NEPA documentation is available at the Defense Technical Information Center (DTIC) repository while that of the other 35 bases is available on DTIC. The 2002 Lackland FONSI states that the demolition of Capehart Housing at Chapman Training Annex was addressed in the May 1998 EA. Neither the 1998 EA or FONSI are available for review, so we base the CATEX A2.3.11 application off of the FONSI from the Altus AFB EA. The only potentailly significant envrionmental effect of the CTA Capehart demolition would be if the housing were considered historic. While we lack complete NEPA documentation, we at least have key documentation confirming that the Air Force and SHPO concur that the Capehart Housing area is not eligible for the National Register of Historic Places, so no adverse effects will result from its demolition.

This 813 covers the specifics of the current proposed demolition project, Project Number MPYJ253828, and the overall result is no significant impact to the human environment, with positive impacts in the areas of hazardous waste, safety, and toxics due to removal of hazardous conditions and substances, and positive effects for land use because a fenced off liability would become developable on an installation with very little developable land.

ACAM modeling (attached) shows the project falls below de minimis threshold.

An Environmental Baseline Survey was conducted in 1998 for transfer of control of the property to the housing privatization contractor. A Supplemental EBS was conducted in September 2025 to meet the EBS requirements for returning the property control to the Air Force. The SEBS assigned Category 1 to the entire parcel, consistent with the original EBS.

The DAF is aware that the President of the United States has issued Executive Order (EO) 14154, Unleashing American Energy, which revoked EO 11991, which amended EO 11514. CEQ has rescinded CEQ NEPA regulations.		
19. ENVIRONMENTAL PLANNING FUNCTION CERTIFICATION *(Name and Grade)* Smith, Seth GS-13	19a. SIGNATURE //Smith Seth DOD - seth.s.smith i:0e.t|fedvis|seth.s.smith//	19b. DATE 12/04/2025

CONTINUATION SHEET

Review Comments:

Hazardous Materials/Waste (08/22/2025 - Hernandez Robert DOD - robert.b.hernandez)
Hazardous Waste (HazWaste) - Positive Effect

All project derived waste (IDW) or excess materials will be properly managed, segregated, sampled, profiled, and manifested as per Sec 3.1.4.1 of the JBSA Environmental Specification Based on waste characterization data reviewed by the 802 CES/CEIE (which at a minimum will be classified as Hazardous/Non-hazardous Solid Waste); all excess soil/waste materials must be manifested/transported to an approved TCEQ permitted disposal location (Covel Gardens or Tessman Rd Landfill) approved by 802 CES/CEIE.

Contractors to provide diverted and disposed material descriptions and weights (to include weight tickets) and disposed debris justifications.

Hazardous Waste (HazWaste) - Positive Effect

Tanks (08/22/2025 - Lopez Raul J DOD CIV - raul.j.lopez1)
Project will have a Neutral Impact on the Environment.

JBSA ENVIRONMENTAL SPECIFICATION 3.4.1
Use of fuel and POL in greater than 50-gallon containers are not allowed on JBSA properties, without prior approval from the 802 CES Environmental offices. Aboveground Storage Tanks for fuel and POL are not authorized on any JBSA installation. Fuel must be brought to the site each day that work is performed, or as needed. Contractor personnel obtaining fuels from refuelers agree to follow all 30 TAC 334 requirements.

JBSA ENVIRONMENTAL SPECIFICATION: 3.4.2
Modification to Existing Tanks/Equipment: The Contractor must notify 802 CES Environmental at least 60 days prior to beginning any removal or repair/modification to existing tank/equipment as the state may be required to be notified in advance with a Construction Notification. If confined space entry into an existing tank is required, then a confined space permit must be coordinated with JBSA Safety, Fire Department and 802 CES/CEIE Environmental office. The Contractor shall provide 802 CES/CEIE Environmental Office with a description of work being performed prior to beginning work. For work on underground and aboveground storage tanks, the Contractor must be licensed and registered in accordance with 30 TAC 334.401.

JBSA ENVIRONMENTAL SPECIFICATION:
3.4 PETROLEUM, OILS & LUBRICANTS (POL)/STORAGE TANKS AND EQUIPMENT

POL Usage: Contractor is not authorized to set up fuel tanks at any JBSA installation. Fuel for vehicles shall be brought to the installation, as needed. Storage of small amounts of POL as well as fueling and lubrication of equipment must be conducted in a manner that affords the maximum protection against spill and evaporation. Manage and store equipment fuel and POL in approved containers for flammable and combustible products in accordance with all Federal, State, and Local requirements. Store on secondary containment pallets, covered impermeable surfaces or in approved storage containers with appropriately sized (110% of largest container) secondary containment and keep liquids away from storm water sewers, grids, channels, and waterways. Fire extinguishers and spill kits must be available, and no smoking signs posted. Prior approval and coordination through 802 CES Environmental office is required for any fuel/POL storage containers greater than 50 gallons. Contractor must ensure compliance with the JBSA facility specific Spill Prevention, Control, and Countermeasures (SPCC) Plans.

For Questions or concerns please contact the JBSA Tanks Program at:

Hazardous Materials/Waste (08/22/2025 - Diaz Steven DOD - steven.a.diaz)
Hazardous Materials (HazMat) - Neutral Effect
This activity will not use a hazardous material.
No concerns on HazMat for demolition

AFCEC Restoration (08/22/2025 - Tarleton Kevin A DOD - kevin.a.tarleton)
The project will have a Neutral Effect on the Environment.

For questions or concerns please contact the JBSA Restoration Program at:
AFCEC/CZOW BLDG. 5595
210-671-5344 (DSN 473)

Safety and Occupational Health (08/25/2025 - Fierros David DOD - david.e.fierros)
Positive Effect- This requirement involves demolition of construction materials which requires a complete hazardous materials survey (e.g., to include asbestos-containing materials {ACM}, lead-based paint {LBP}, mercury, and polychlorinated biphenyls {PCB}) regardless of original construction date (see TAHPR in Related Documents tab) prior to building disturbance. The survey will include roofs, basements, HVAC ducts or insulated piping. A copy must be sent to the location-specific JBSA Environmental office for further review prior to project execution. The Proponent must coordinate all contract sampling and analysis and any planned abatement activities through 802 CES/CEIE Environmental Office. This facility will require a Texas DSHS (Department of State Health Services) Notification for Demolition even if there is no asbestos present and regardless of original construction date must be entered by 802 CES CEI Toxic representative.

Positive Effect

Positive Effect

Positive Effect

Positive Effect

AICUZ/Land Use (08/25/2025 - Amick Micaiah K DOD - micaiah.k.amick)
The action will have a positive effect on Land Use. The action complies with land use criteria. This review does not constitute planning approval for the action.

For questions concerning planning actions, airfield waivers, or siting requests, please contact the Planning Inbox:
802ces.cenpl.communityplanners@us.af.mil.

Air Quality (08/25/2025 - Wood Daniel DOD - daniel.s.wood1)
Neutral Effect

Air pollutants are expected to be generated as a result of this action and therefore require an Air Conformity Applicability Model (ACAM) analysis.

Upon review of the ACAM report, the estimated emissions resulting from the action(s) were determined to be below the general conformity threshold limits and are considered de minimis.

Minimize dust during construction, demolition, renovation, and road
repair. If visible dust emissions approach property line, minimize emissions with water spray or mist.

Minimize nuisance dust emissions.
Per AFMAN 32-7002, no permits are required.

For questions or concerns please contact the JBSA Air Program at:

JBSAAirQualityProgram@groups.af.mil

or the AQ Team Lead at:

Eric Cavazos, eric.cavazos.1@us.af.mil, 210-473-5321

or the AQPM at the respective installation:

LAK: Shaibu Abdulai, shaibu.abdulai@us.af.mil, 210-671-1523
FSH/BUL: Ryan Rhodes, ryan.rhodes.21@us.af.mil, 210-671-2268
RND: Jennifer Kippenberger, jennifer.kippenberger@us.af.mil, 210-671-4392

Biological Resources (08/29/2025 - Whitney Emily DOD - emily.a.whitney)
The project will have a Positive Impact on the Environment upon compliance.
Projects involving the removal of installment trees or new landscapes must comply with the JBSA INRMP to include the Migratory Bird Treaty Act, oak wilt prevention, JBSA BASH Plan, JBSA Critical Period Management Plan, water usage, native species selection and invasive species management.
Use caution year-round when removing vegetation in order to protect nesting species and bat species that may be present.
All wounds (including accidental) to the trunk, limbs and root system of oak trees, regardless of the time of year, must be painted immediately after trimming, cutting or pruning using black paint (latex, oil-based, spray-on, brush-on or wound dressing) to prevent the spread of oak wilt.
No ground disturbance or vegetation removal (including dead vegetation) during migratory bird nesting season (15 March - 31 August). If vegetation removal is required during this time, a survey must be completed by qualified personnel in accordance with nest survey protocol.
Any digging on JBSA will require a dig permit.
Prior to conducting the demolition, ensure that no active nests are present in accordance with the MBTA.
If bats are found in buildings that are occupied by people or set to be demolished, contact Pest Management.
Project is not sited in or adjacent to a stream and/or wetland.
Project is not sited within a floodplain, however please be aware that extreme changes to landscape/terrain can affect the floodplain area.
The removal of tress should only occur if the need is readily apparent. Trees should not be removed for this project since the goal is to return a natural state at this time. Maintaining a natural canopy for shade is preferred over the installement of shade structures.
For Questions or concerns please contact the JBSA Natural Resources Program; 502CES.CEIEA.NATURALRESOURCES@us.af.mil.

Other (08/29/2025 - Hansen Heather DOD - heather.d.hansen)
Solid Waste - Neutral Effect
The facility will not be used for managing solid or hazardous wastes.

This project will generate Demolition Debris/Solid Waste and will require an Integrated Solid Waste Management Plan (ISWMP) in accordance with JBSA Environmental Specification 01 57 20. (01 57 20 shall be a part of all contracts.) The ISWMP SHALL BE submitted to 802 CES/CEIE within 15 days after notice to proceed and PRIOR to initiating any site preparation work.

General debris recycling: The Proponent/Contractor shall recycle all demolition debris to the maximum extent possible, including materials such as, but not limited to, concrete (including concrete with rebar), brick, asphalt, all metals (including piping and appliances), building insulation, wood, wood paneling and wainscoting, roofing materials, wallboard, carpet, ceiling materials, flooring materials, cardboard and other packaging materials, and similar materials that do not constitute, in and of themselves or in combination with other materials, hazardous materials.
Hazardous material/Universal waste recycling: The Proponent/Contractor shall recycle hazardous materials and Universal wastes (such as mercury thermostats, lights/lamps/bulbs/tubes, ballasts, transformer oils, etc.) to the maximum extent possible. Materials shall be manifested to legitimate recyclers; manifests shall only be signed by duly appointed personnel from 802 CES/CEIE.
Metal recycling: It is preferred that demolition contracts are written to require recycling of scrap metal through the JBSA Qualified Recycling Program (QRP); the QRP will retain proceeds from the sale of scrap materials. The Proponent/Contractor may provide scrap metal (including but not limited to piping, metal furnishings, HVAC components, wires, appliances drained of refrigerants), cardboard, and wood pallets to the JBSA QRP for recycling. The QRP will assist with scheduling roll off containers from local metal recycler(s) for the project.
If the Proponent/Contractor retains ownership of metal or other materials for reuse or recycling, they shall submit monthly reports, with weight tickets, detailing material type, weight, and reuse/recycling facility to 802 CES/CEIE for JBSA's mandatory disposal/recycling reporting.
Trees/shrubs/vegetation: It is preferred that contracts are written to require sending these materials to compost or mulch facilities to the maximum extent practicable. Proponent/contractor shall submit monthly reports detailing material, tonnage/cubic yardage, and compost/mulch facility to 802 CES/CEIE for JBSA's mandatory disposal/recycling reporting.
Clean concrete, asphalt, and asphalt milling materials will be manifested to a local recycling facility. Manifests will be printed and signed by JBSA 802 CES/CEIE personnel.
Use of local reuse/recycling programs and organizations (such as but not limited to Habitat for Humanity, City of San Antonio Material Innovation Center) is encouraged. Proponent/contractor shall submit monthly reports detailing material types, tonnage/cubic yardage, and reuse/recycling facility to 802 CES/CEIE for JBSA's mandatory disposal/recycling reporting.

The ISWMP shall include the following:
1. Names of individuals responsible for waste prevention, waste management, and waste tracking.
2. Actions that will be taken to reduce solid waste generation. (not applicable to this project)
3. Description of the specific approaches to be used in recycling/reuse of the various materials generated, including the areas and equipment to be used for processing, sorting, and temporary storage of wastes.
4. Characterization, including estimated types and quantities, of the waste to be generated.
5. Name of landfill to be used and the estimated costs for use, assuming there would be no salvage or recycling on the project.

6. Identification of local and regional reuse programs to be used.
7. List of specific waste materials that will be salvaged for resale, salvaged and reused, or recycled.
8. Name of recycling facility(ies) to be used and materials accepted.
9. Identification of materials that cannot be recycled/reused with an explanation or justification.
10. Anticipated net cost savings determined by subtracting Proponent/Contractor program management costs and the cost of disposal from the revenue generated by sale of the materials and the incineration and/or landfill cost avoidance.

ALL waste materials, whether landfill-disposed or recycled, will be properly sampled, characterized, profiled, and manifested for disposal or recycling prior to leaving JBSA in accordance with JBSA Environmental Specification 01 57 20. Contact 802 CES/CEIE for sampling requirements, profiles, and manifests. Only appropriately appointed 802 CES/CEIE personnel will sign profiles and manifests. Proponent/Contractor will submit to 802 CES/CEIE monthly a listing of all waste materials generated, their weights, where they were recycled or landfill disposed, costs for disposal and recycling, and cost savings from recycling instead of landfill disposal. It can take up to 2 weeks to get manifests for recycling or disposal; please plan ahead.
Contact 802 CES/CEIE for information, questions, manifest requests, and to submit ISWMP and disposal reports: 802ces.ceiea.p2@us.af.mil
Contact the JBSA QRP for recycling questions, information, and to schedule metal dumpsters for recycling, if recycling metals through the QRP: 802CES.CEIE.Recycling@us.af.mil

Cultural Resources (09/02/2025 - Omar Mahamoud D DOD - mahamoud.d.omar)
Neutral/No Effect

No concerns on this undertaking. The project area was previously surveyed under Section 110 and noted as DNE.

Water Resources (09/09/2025 - Guerrero Monica DOD - monica.j.guerrero)
The project will have a NEUTRAL Impact on the Environment.

- If the project soil disturbance (clearing, grading, excavating, stockpiling, demolition, laydown, etc.) is 5 acres or greater (Large Construction), it requires Texas Commission on Environmental Quality (TCEQ) authorization of the Texas Pollutant Discharge Elimination System (TPDES) TXR150000 Construction General Permit (GCP) – this includes projects on land areas less than 5 acres that are part of a larger development plan that is equal to or greater than 5 acres. A Storm Water Pollution Prevention Plan (SWPPP) must be developed and maintained/updated on site. A publicly visible Large Construction Site Notice (LCSN) must be posted. A Notice of Intent (NOI) must be submitted to the TCEQ. Copies of the LCSN and NOI must be submitted to the JBSA Water Quality Program Manager (WQPM) team for review prior to the start of construction. A Notice of Termination (NOT) must be submitted to the TCEQ prior to project completion. A copy of the NOT must be submitted to the JBSA WQPM team.

- It is recommended to use existing parking lots and paved surfaces for construction laydown.

- For large construction sites, all construction materials and fill/spoils piles must be removed prior to TCEQ submission of the NOT (TXR150000 Part II.F.2.e).

- Prior to completion of a project, all soil disturbing activities related to construction or demolition at the site have been completed and a uniform (that is, evenly distributed, without large bare areas) perennial vegetative cover with a density of at least 70% of the native background vegetative cover for the area has been established on all unpaved areas and areas not covered by permanent structures, or equivalent permanent stabilization measures (such as the use of riprap, or gabions) have been employed.

- Ensure that any material/debris generated during this activity and during Operation and Maintenance (O&M) activity is not allowed to enter storm drains or pollute storm water runoff.

For questions or concerns please contact the JBSA Water Quality Program at:
RND/SAF/CAN: Hunter Washburn, scott.washburn.1@us.af.mil
SAM/BUL: Gerald Johnson, gerald.johnson.29@us.af.mil
LAK/CTA/KEL: Monica Guerrero, monica.guerrero.2@us.af.mil, (210) 671-6760

Hazardous Materials/Waste (09/09/2025 - Schmidt Franz DOD - franz.j.schmidt)
All work must be conducted in compliance with the JBSA Soil Management Plan. All excess soils not used on site must be properly characterized and disposed of off base at an approved facility. Soils within drip line of housing units may contain lead and chlordane. Contact Hazardous Waste, Rob Hernandez, prior to any movement of such soils around the site.

Legal (11/26/2025 - Arredondo April A DOD - april.a.arredondo1)
Legally sufficient.
